
18 Vision of Future Control Centers in Smart Grids

*Fangxing Li, Pei Zhang, Sarina Adhikari,
Yanli Wei, and Qinran Hu*

CONTENTS

18.1	Introduction	422
18.2	Monitoring Functions	422
18.2.1	From Separate System Models to One Unified System Model	422
18.2.2	From State Estimation to State Measurement	423
18.2.3	From One-Line Diagram to Wide-Area Geographical Information System (GIS).....	424
18.2.4	From Limited Stability Margin Monitoring to True Stability Margin Monitoring	424
18.2.5	From Mixed Communication System to Dedicated Communication System.....	424
18.2.6	From Limited Customization to More Flexibility	425
18.3	Assessment Functions.....	425
18.3.1	From Unprioritized Alarm System to Prioritized Alarm System	425
18.3.2	From Steady-State Security Assessment to Dynamic Security Assessment.....	426
18.3.3	From Analysis of the Next Operational Interval to Look-Ahead Analysis	426
18.3.4	From Deterministic Approach to Probabilistic Approach.....	426
18.3.5	From Off-Line Model Validation to Online Model Validation	426
18.4	Control Functions	427
18.4.1	From Local Control Actions to Globally Coordinated Control Actions.....	427
18.4.2	From Off-Line-Based Parameter Settings to Online Reconfigured Parameter Settings	427
18.4.3	From Off-Line-Based Control Strategy to Online Restorative Plans.....	428
18.4.4	From Supply-Side Control Only to Integrated Demand-Side Control	428
18.5	Infrastructure and Technology Needed	429
18.6	Technology Roadmap	430
18.7	Conclusions	432
	References.....	433
